

New York **SEAFOOD** Summit

February 22-26, 2021

Thursday, February 23rd 3-4 PM: New York Aquaculture with John Ng

John is president of Hudson Valley Fisheries, which is a 1200 metric ton, 160,000 square foot indoor aquaculture facility that uses the latest recirculating aquaculture system (RAS) technology to produce nearly ten thousand pounds of its nutrient-rich New York Steelhead weekly. With complete egg to plate transparency, the facility serves customers in the New York City to Boston, MA range, offering delivery of head-on, gutted 6.5-pound and filleted steelhead within 24-48 hours of humane harvesting. Steelhead is a species of salmonid native to cold-water tributaries in the Pacific. Hudson Valley Fisheries, North America's largest land-based, commercial-scale fully sustainable steelhead farm, is based in Hudson, New York.
